Killing Our Oceans: Dealing with the Mass Extinction of Marine Life

In his Ark of the Broken Covenant, Kunich showed that Earth's species are concentrated in 25 zones of ecological significance known as biodiversity hotspots, and maintained that we'd go a long way toward saving many species from extinction if we'd focus our protective laws and regulations on these zones. In Killing Our Oceans he extends this analysis to the extraordinary pockets of life in the oceans that are similarly threatened. What others say about this ebook:

Review 1:

This book was ahead of it's time - it's ~10 years old but is prophetic of the collapse of the Oceans sea creatures and the potential for a mass extinction of sea life. We're in the middle of this! But hopefully we're not too late to turn things around!

Review 2:

This book is simple and delightful to read. Aside from the whole mass extinction part, it is highly enjoyable, accessible and timely. I urge every member of the human species to read this. Our lives depend on the message in this book sinking in.

Review 3:

After his last book focused on terrestrial hotspots (Ark of the Broken Covenant (2003)), Professor Kunich has now turned his attention on the extinction of marine life. Starting off with an easy-to-read and informative outline of the marine environment, followed by an analysis of how the current international and national legal frameworks designed to protect it fall short, he once again has brilliantly combined his prior background as a scientist with his current profession of the law. The book is filled with his folksy style of writing and comparison ("The forces that impede the noble parade of failed efforts. . . . are as potent and immutable as those that have conspired tragically for nearly a century to block the Chicago Cubs from a World Series championship.") that make it a joy to read. Devoting the last two chapters to a practical suggestion of how to protect the "marine hotspots" before it is too late, he calls on the United States to take the lead in this endeavor. Let's go!

Review 4:

It's long been known humankind is destroying the oceans, and plenty of titles have surveyed the problem: what makes Killing Our Oceans: Dealing With the Mass Extinction of Marine Life different is an extension of the author's prior analysis of threatened hotspots from land to pockets of ocean life. Here also is a focus on international law and regulations pertaining to the ocean, along with efforts and language of domestic laws of nations with such key marine resources - another differentiation which makes KILLING OUR OCEANS a powerful recommendation not just for college-level science holdings, but collections concerned with international legal applications of social issues. It's this dual legal and science approach which makes for a top pick, here.
